PROFILE

Driven and forward-thinking Computer Science Engineering student specializing in Data Science, with a strong foundation in backend development and cloud computing. Passionate about tackling AI-driven tasks and stepping into tech leadership roles. I thrive in fast-paced, high-stakes environments, firmly believing that pressure is a privilege that brings out the best in us.

EDUCATION

MVJ College of Engineering | Expected Graduation: 2028
Bachelor of Engineering (B.E.) – Computer Science and Engineering (Data Science)
Overall CGPA: 8.0

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL, LabVIEW (graphical programming)

Cloud & Infrastructure: Cloud Computing, Virtual Machines, Vagrant, Linux/Ubuntu

Data & Visualization: Tableau, Power BI

Core Strengths: Backend Development, AI-Driven Tasks

Interpersonal Skills: Impactful Communication, Collaborative Teamwork, Technical Leadership

LEADERSHIP

President, Analytix Club (Dept. of CSE, Data Science) | 2025 to Present
- Lead the department club across its technical, design and media teams.

Technical Lead, Software Development Club (SDC) | 2025 to Present
- Lead the club's technical team.

PROJECTS

Plant Disease Detector Application
- Built and deployed a web-based plant disease detection application that classifies diseases from leaf images using machine learning models trained on robust Kaggle datasets.
- Leveraged Python and Streamlit to create an accessible, user-friendly interface for accurate prediction and analysis.

Hyperlocal Monsoon Detector
- Developed a hyperlocal weather tracking tool designed to analyze and detect localized monsoon patterns.
- Focused on backend data processing to ensure accurate, real-time localized tracking and reporting.

Lost and Found App
- Engineered the backend architecture for a community-focused lost and found application.
- Designed robust data management workflows using SQL to ensure seamless communication between the client and server.

ZEWA (Zero Waste)
- Built an app that reduces food wastage by offering big discounts at limited time intervals, helping consumers save money and producers recover value from surplus food.
- Designed time-limited discount windows that create urgency for buyers and help producers sell perishable stock before it expires.
